SOLVING SCADA PAIN POINTS

Why SCADA is Broken & How Ignition Can Fix It

There are many pain points associated with SCADA software, and it is no coincidence that Ignition by Inductive Automation® addresses each of those concerns. In fact, Ignition was designed to solve the cost and performance problems so frequently found in traditional SCADA. Below are the 19 biggest SCADA pain points along with the specific way that Ignition solves them. Point by point, you can clearly see why Ignition is the best SCADA solution available.

WORKABILITY

Ignition takes what you have and makes it a connected and well-oiled machine.

	PAIN POINTS	SOLUTIONS
1	Can't create database front-end GUIs without programming hacks	Ignition gives you the tools to develop almost anything
2	No support for standards such as OPC-US, JDBC, SOAP, Microsoft Active Directory™	Ignition comes with a built-in OPC-UA server and JDBC drivers, and uses Microsoft Active Directory™
3	No support for relational databases	Ignition leverages relational databases like SQL
4	Setting up redundancy is much harder than it should be	Simply install two Ignition platforms to set up redundancy; no additional software necessary
5	Only works with specified Windows versions and service pack levels	Ignition is cross-platform including every version of Windows
6	Designers are out of sync with target software	

TIME

Ignition takes what used to require days, weeks or hours to complete and does it in minutes.

	PAIN POINTS	SOLUTIONS
1	Takes hours, days, or weeks to install	Ignition deploys in 3 minutes
2	Can't download the software today	
3	Deploying applications to runtime clients is tedious and takes clients offline	When you upgrade the server, all clients update instantly
4	You have to shut down to add functionality or make configuration changes	Hot-pluggable modules allow you to add functionality without shutting down your system
5	Designers don't support concurrent development	Unlimited designer clients allow multiple developers to work on the same project at the same time

MONEY

Stop throwing your money away and start saving with Ignition.

	PAIN POINTS	SOLUTIONS
1	Runtime clients are sold and installed separately, by the seat	Ignition comes with unlimited tags and clients
2	Prices skyrocket when you add tags and runtime clients	
3	You have to buy before you develop; no unlimited-time trial available	Download the full version of Ignition for free
4	Getting an actual price is very difficult	Prices are listed on the Inductive Automation website
5	Extremely high support fees	Support contracts are reasonably priced and include 90 days of free phone support
6	Charges integrators for tech support	Free tech support for integrators - after all, they sell the product!
7	Expensive beyond any practical use	Affordably licensed by the server
8	Designers are sold and installed separately, by the seat	Designer application included out of the box

by Inductive Automation

Ignition Is Powerful

With so much going on in your facility every day, the ability to accurately track it all is essential to your success. However, all the data in the world is of little use without the ability to easily display it, powerfully analyze it, and quickly act on it. Let Ignition put a world of control and monitoring functionality at the tips of your fingers. Visit our site today to find out more.

Ignition Is Simple

From the bottom up Ignition is designed to overcome the pain points of old SCADA software and make it simpler to get things done. Ignition is cross-platform compatible and web deployed so you can install it in minutes to any device equipped with a web-browser. You can also update and expand your system to all clients instantly, without shutting the system down. See for yourself how Ignition can make your life simpler; download it for free today.
